

(Used tablet & scanned prototype)

## Paper Prototype session

~~BB~~ B.M

### Find event

- Could see events in list.
- (Q) "Will I be able to see the actual name as well as the time?"

↳ \* Shown extra details \*

Understood

Commented on difficulty of seeing details of list

"Could you make font smaller?"

↳ Told participant about tags on top.

"Buttons too small for finger"  
"Do you really need create event & map on this screen? I would press this to create an event"

tags

Menu  
Top  
Left

↳ Thinks we should strip it back and section UI into tasks:

- Looking for event (all he would use)
- Creating event

R + M  
trivia

"Once I click on an event, I don't need to see the tags" (for create event)

↳ Full screen extra details and immediately include map

\* Map discussed \*

↳ Would you ~~as~~ like ~~as~~ a map for events you have RSVP'd to?

→ "Yes."

\* He doesn't care about seeing all RSVP'd for a week later. Doesn't help him to see where a study session is in a week

wants  
to press  
events in  
list and  
location  
see

↳ asked to explain

"In my first week I look up where I have to go then I know where to go all seem"

↳ told it's ~~once~~ <sup>one</sup> off

"So its ... (discussion)"

summary  
of convo

• Wouldn't use map until the event was about to start. Seeing map with G maps style pins = he couldn't use for all his events.

→ May need to be tested more!

\* Shawn creator \*

↳ Preferred drop down

\* Shawn chat \*

↳ Asked if he feels like it would increase his sense of community (if he was a user)

"It's kind of like FB but compiles them all together"

ooo oo

↳ For him to use it, system needs to separate itself from FB as he is much more likely to use that.
